**The Electrical Contractor for
Gas Compression, Transmission & Storage**

Any Environment, Any Condition, Any Time—WE CAN DO IT!

Company Info

Evets Electric was founded in January of 1968 as an electrical contractor that specialized in electrical installations for complex oil and gas projects. This venture was created to provide a source for a qualified company to complete electrical installations in the oil and gas industry throughout the country. Our advanced knowledge of the oil and gas industry and our ability to work throughout the country has helped our customers to minimize their overhead costs associated with finding and training local or inexperienced contractors as well as mitigate the risks of working with an unknown or inexperienced contractor.

Our experienced in-house support staff, which includes a full time Safety Director and Quality Control Manager, allows us the ability to manage and control very complex projects of any size. Our commitment to hazardous and industrial projects allows us to provide safe and dependable projects to our customers throughout the country. This commitment gives our customers the peace of mind that their projects will be installed correctly and on time by a company specialized in installations for their industry.
